

# Homeeograms

## What are Homeeograms?

Homeeograms are simple programs that you can create in your homee app to control smart devices in your home according to your needs and daily routines. They consist of triggers, conditions and actions.

### Homeeogram triggers

You can set one or more triggers. As the name suggests, they determine when and how your Homeeogram is triggered. You can choose multiple options, such as time, sun position, weather, vacation mode—or even Homeeograms to trigger a Homeeogram. Just be creative and enjoy all the endless possibilities.

### Homeeogram conditions

A condition restricts the trigger. This means that your Homeeogram will only be triggered when all the set conditions are met.

### Homeeogram actions

Here, you define what should happen when the Homeeogram is triggered. Of course, you can also select multiple triggers.

#### Trigger

e.g. device, time, weather...

#### Condition

e.g. device, time

#### Actions

e.g. device notification
